Charlotte, NC, January 23, 2014 – Verbatim, the global leader in data storage technology including portable hard drives, USB flash drives, CDs, Blu-ray discs and memory cards, announces the addition of a Kindle Fire version of its MediaShare wireless app with support for Kindle Fire, Fire HD and Fire HDX tablets. The MediaShare Wireless app works with the MediaShare Wireless Portable Streaming Device allowing you to stream media on your tablet/smartphone from your portable media storage devices, such as SD cards, USB drives or portable HDDs and external SSDs via a secure, Wi-Fi connection, wherever you are. With the addition of the Kindle App, MediaShare Wireless now supports iOS, Android and Kindle Fire platforms.

The MediaShare Wireless allows you to share and stream data safely and securely with up to 5 users simultaneously with password controlled Wi-Fi access to stored content. Users can enjoy different content on each of the devices, for the ultimate in flexibility. While the built-in USB port and SD Memory slot allows easy access to content from your USB drive, portable hard drive, external SSD, or SD memory card.

"As any tablet user can attest, larger storage capacity, along with the ability to quickly share files has become increasingly important," said Mark Rogers, Verbatim Product Manager, Flash Memory Products. "The Verbatim MediaShare Wireless meets that need, allowing users to easily access, store and share media wirelessly, between multiple devices, including the popular Kindle Fire tablet series."

MediaShare Wireless supports access for up to 5 simultaneous users to your removable media, allowing unlimited storage potential.
